<p><b>Notes on risk of bias</b> Ossenkoppele 2013: It is unclear whether a consecutive or random sample of patients was enrolled and whether inappropriate exclusions were avoided; the index test was interpreted with knowledge of the reference diagnosis; a subgroup analysis was used where &gt;10% study population was excluded.</p> <p><b>Notes on indirectness</b> Ossenkoppele 2013: It is unclear whether the LeARN cohort consisted of people with suspected cognitive impairment.</p>
