

P.2.1.27 Abbreviated Mental Test, AMT (<8)

| Studies | Design | Total N | Sens (95%CI) | Spec (95%CI) | Measure | Summary of findings (95%CI) | Risk of bias | Inconsistency | Indirectness | Imprecision | Other considerations | Quality |
|--|-------------|---------|-------------------|-------------------|---------|-----------------------------|--------------|---------------|--------------|-------------|----------------------|----------|
| PRIMARY CARE | | | | | | | | | | | | |
| 1 study (Flicker 1997) | Prospective | 299 | 0.73 (0.66, 0.78) | 0.71 (0.60, 0.80) | LR+ | 2.51 (1.78, 3.56) | V. serious | n/a | Not serious | Serious | - | VERY LOW |
| | | | | | LR- | 0.38 (0.30, 0.50) | V. serious | n/a | Not serious | Not serious | | LOW |
| Notes on risk of bias | | | | | | | | | | | | |
| Flicker 1997: Due to non-pre-specification of test thresholds; large number of patients excluded from study; lack of clarity about patient groups included in the analysis and whether the reference standard results were interpreted without knowledge of the results of the index test. | | | | | | | | | | | | |
