Appendix E: *Relatedness Rubrics for Aims 2 and 3*

Appendix E Table 3. Population Sample Relatedness Rubric

PRE-SCREEN: Split-sample validation? (yes/no)	
PRE-SCREEN: Index condition match? (yes/partial/no)	
Recruitment Indication	
Inclusion Criteria (as written)	
Exclusion Criteria (as written)	
Recruitment Setting (inpatient, outpatient, ED)	
Risk Factors	
1. Diabetes (%)	
2. Hypertension (%)	
3. Hyperlipidemia (%)	
Enrollment Period (time period of patient inclusion, e.g. 2001-2005)	
Follow-up time (e.g. 3 months, 1 year)	
Outcome	

Rubric developed by clinicians to assess population relatedness between the Population Sample CPMs and the clinical trials with which they were matched. Each domain was compared between the CPM and clinical trial for a relatedness assessment: little to no significant clinical differences would results in "Related," and many and/or significant differences would result in "Distantly Related" determinations.
