

**Figure 26: Sensitivity and specificity of salt intake for diagnosing adrenal insufficiency (cortisol peak response < 11 µg after low dose 10 µg short corticotropin stimulation test) in people with HIV-infection**

**Figure 27: Sensitivity and specificity of salt intake for diagnosing adrenal insufficiency (twofold value of basal cortisol after low dose 10 µg short corticotropin stimulation test) in people with HIV-infection**

**Figure 28: Sensitivity and specificity of salt intake for diagnosing adrenal insufficiency (any cortisol value > 18 µg/dL after low dose 10 µg short corticotropin stimulation test) in people with HIV-infection**

**Figure 29: Sensitivity and specificity of salt intake for diagnosing adrenal insufficiency (any cortisol value > 20 µg/dL after low dose 10 µg short corticotropin stimulation test) in people with HIV-infection**

**Figure 30: Sensitivity and specificity of salt craving for diagnosing adrenal insufficiency (serum cortisol < 500nmol/L after low dose (1 µg/ml) short corticotropin (Synacthen®) stimulation test in people with suspected TB**
